

# Case Study

## Supernus Pharmaceuticals - Rockville, MD

### The Challenge

The project included 300+ offices, open spaces and common areas over multistory buildings all to be interconnected and controlled on a general schedule.

### The Solution

The installation is 100% wireless with not a single foot of CAT5 pulled. No additional infrastructure was installed.

Over 1,500 BubblyNet devices (sensors, controllers and switches) create a dense Bluetooth Mesh network across 120,000 sq.ft of office space.

Open areas are all on the same schedule with a transition to sensors controls after business hours; private offices allow for manual over-ride of sensors control; conference rooms are on scenes and sensor control; Daylight Sensing is in use in different areas of the building and 1 Gateway allows for desktop control of all the space from any location.
