

Case Study

LA Fitness - multiple locations

The Challenge

The project involved a DMX lighting system requiring recallable dynamic color changing scenes to meet the client's operational and aesthetic goals. The client wanted the ability to fully customize what was shown on the touchscreen display and to control the system remotely. Additionally, the system needed to be easily scalable to accommodate future expansions or changes.

The Solution

A DMX lighting control system was deployed with a touchscreen interface that allowed the client to fully customize the display and easily access all dynamic scenes. Remote connectivity enabled convenient off-site management, and the system's scalable architecture ensured seamless expansion or reconfiguration for future needs. The result was a flexible, user-friendly lighting solution that gave the client complete control over both the interface and dynamic lighting scenes while supporting long-term adaptability.
