

Netflix - Los Angeles, CA

The Challenge

The outdoor lighting include RGB +W luminaires with proprietary DMX drivers but DMX wiring couldn't be pulled between exterior and interior with control to be available from the indoors.

The Solution

The outdoor network was wired with DMX cable and controlled by BubblyNet DMX controller C-X4C.

The C-X4C main function is the scheduling of different scenes through the evenings.

For ease of use, ownership was provided with a QR code to be stored and accessed inside the building; scanning the QR code gives access to the network and outdoor lighting configuration for manual overwrite.

The luminaires are direct White, indirect RGB. A special page on the App was designed to make the control of the luminaires more intuitive.
