

# Case Study

## Netflix - Los Angeles, CA

### The Challenge

The outdoor lighting include RGB +W luminaires with proprietary DMX drivers but DMX wiring couldn't be pulled between exterior and interior with control to be available from the indoors.

### The Solution

The outdoor network was wired with DMX cable and controlled by BubblyNet DMX controller C-X4C.

The C-X4C main function is the scheduling of different scenes through the evenings.

For ease of use, ownership was provided with a QR code to be stored and accessed inside the building; scanning the QR code gives access to the network and outdoor lighting configuration for manual overwrite.

The luminaires are direct White, indirect RGB. A special page on the App was designed to make the control of the luminaires more intuitive.
